

Finding & Reconciling Revenue on the New Site

A walkthrough for Jan & Jez — where the money is, and how it differs from WooCommerce

The new TAT for Animals site takes payments through **Stripe** (credit/debit cards) and **PayPal** — not WooCommerce. Existing subscribers stay on the old WooCommerce/Amelia system exactly as they are; only **new sign-ups** go through the new site. So for a while, revenue comes from **both places at once**. This guide covers the new side, and points out where it looks different from what you're used to.

The short version: Stripe's own dashboard is the main place to see and export new-site revenue. PayPal shows its own share. Supabase is just the member list for cross-checking. Nothing new needs to be built — these tools already do it.

1. Where the money now lives

Three places hold the information you'll need:

System	What it holds	Who's on it
Stripe	All card payments, subscriptions, refunds, payouts to the bank	New card members
PayPal	All PayPal subscription payments & refunds	New PayPal members
Supabase	The member list (name, email, tier, status) — for cross-checking only	All new members
WooCommerce	The OLD system — existing subscribers still bill here	Existing members

2. Stripe — the main place for card revenue

a) Getting Jan her own access (read-only)

So Jan can look without needing anyone else, add her as a read-only team member:

- In Stripe, open Settings (gear icon, top right) → Team.
- Click "Invite", enter Jan's email, and choose the Accountant role (view + export, no changes — this is the role we actually used).

☒ Already done — Jan and Jez were both invited via Tapas's Stripe account (Jan as Accountant, Jez as Analyst).

b) Seeing who paid what

- Payments (left menu) — every individual charge: customer, amount, date, and whether it succeeded, failed, or was refunded.
- Subscriptions (or Billing → Subscriptions) — each active membership, its plan, price, and next renewal date.
- Customers — look up one person and see their full payment history.

Stripe → Payments list for the current month.

The screenshot shows the Stripe dashboard for 'Tatlif'. The left sidebar contains navigation links: Home, Balances, Transactions (highlighted), Customers, Product catalog, Shortcuts (Payments analytics, Apps overview, Connect, Reports, Revenue Recognition), and Products (Payments, Billing, Reporting, Apps, More). The main area is titled 'Transactions' and includes a search bar, a '+ Create payment' button, and an 'Analyze' button. Below this is a notification about instant payouts. A summary bar shows: All 7,349, Succeeded 6,410, Refunded 147, Disputed 7, Failed 639, and Uncollected 0. Below the summary are filter buttons for Date and time, Amount, Currency, Status, Payment method, and More filters. There are also 'Export' and 'Edit columns' buttons. The table below lists transactions with columns: Amount, Payment method, Description, Customer, and Date. The first six rows show transactions for 'TATLife' with amounts ranging from \$17.00 to \$528.00, all in USD. The last row shows a transaction for 'Downey52@yahoo.com' for \$17.00. The table indicates it is showing 1-20 of 7,349 items.

Amount	Payment method	Description	Customer	Date
\$17.00 USD	Card	TATLife® - Order 56887	hanneke_de_leeuw@hotmail.com	Aug 7, 3:05 PM
\$17.00 USD	Card	TATLife® - Order 56882	zonatsou@gmail.com	Aug 7, 5:54 AM
\$17.00 USD	Card	TATLife® - Order 56851	talk2lynda@yahoo.com	Aug 6, 11:37 PM
\$17.00 USD	Card	TATLife® - Order 56879	leewhet@gmail.com	Aug 6, 12:27 PM
\$528.00 USD	Card	TATLife® - Order 56878	barbhuerta@gmail.com	Aug 6, 8:00 AM
\$17.00 USD	Card	TATLife® - Order 56876	Downey52@yahoo.com	Aug 5, 11:49 AM

c) Seeing the revenue totals & bank payouts

- Balance → Payouts — the actual deposits Stripe sends to the bank, and which payments make up each one. This is what to match against the bank statement.
- Reports — revenue, fees, and refunds summarised by date range (monthly, etc.).

Stripe → Balance → Payouts, showing a payout and its included transactions.

Summary

	Count	Gross	Fees	Total
Charges	2	\$34.00	-\$1.84	\$32.16
Refunds	0	\$0.00	\$0.00	\$0.00
Adjustments	0	\$0.00	\$0.00	\$0.00
Payouts				\$32.16

Transactions Export

Type	Gross	Fee	Total	Description	Date
Charge	\$17.00 USD	-\$0.79 USD	\$16.21 USD	TATLife® - Order 56876 - Name: Alan Downey, Username: alan.downey	Aug 5
Charge	\$17.00 USD	-\$1.05 USD	\$15.95 USD	TATLife® - Order 56871 - Name: Hui Fang, Username: hui.fang	Aug 5

3. Exporting to a spreadsheet (for reconciliation)

Most reconciliation is easiest in a spreadsheet. Stripe exports to CSV in a couple of clicks:

- On the Payments (or Reports) page, set the date range for the month.
- Click Export (top right) → choose the columns → download the CSV → open in Excel / Google Sheets.
- The export includes the fee and the net amount per payment, so gross, fees, and net all reconcile.

Stripe → the Export button, date range, and column options.

Export payments

4. PayPal — the other payment source

a) Getting Jan her own access (view-only)

To give Jan her own login, add her under **Account Settings → Manage users → Add user**, then choose her privileges. PayPal is a bit more restrictive than Stripe here: a user can be given permission to **view the account balance**, or separately, permission to **run and download reports** — PayPal doesn't allow combining those two on one login. If Jan needs both, the simple fix is two limited logins for her (one for balance, one for reports); either way, she never gets permission to move money.

PayPal → Account Settings → Manage Users.

The screenshot shows the PayPal 'Users' management interface. At the top, there's a header with 'TATLife' and a user profile 'EK'. Below the header, the 'Users' section has a search bar and two buttons: 'Manage Approvals' and 'Add User'. The main content is a table of users with the following columns: User ID, Email, First Name, Last Name, Status, and Actions. The table contains three entries:

User ID	Email	First Name	Last Name	Status	Actions
JO janorin53	janorin53@gmail.com	Jan	Orin	Pending	⋮
NA philoleben@gmail.com	philoleben@gmail.com			Active	⋮
JT tatlifejez	customerservice@tatlife.com	Jez	TATLife	Active	⋮

b) Seeing what's there

- Activity → All Transactions — every PayPal payment and refund, filterable by date.
- Reports → Statements / Transactions — monthly summaries and CSV downloads, the same idea as Stripe.
- PayPal also deducts a processing fee, so its net deposit is a little less than the gross — same as Stripe.

PayPal → Activity, showing this month's transactions and the Download button.

The screenshot shows the PayPal TATLife interface. On the left is a sidebar with navigation links: Home, Activity, All Transactions (selected), All Reports, Business Overview, Tax Documents, Sales, Finance, Operations, Pay & Get Paid, and Growth. The main area is titled 'Transactions' and features a search bar and a table of transaction records.

☐	Date	Type	Name	Status	Gross	Fee	Net	Actions
☐	8/8/26, 9:52 AM	Transfer to	Bank Account	Completed	\$522.37 USD	\$0.00 USD	\$522.37 USD	⋮
☐	8/8/26, 4:16 AM	Recurring payment from	Ernest Almos	Completed	\$12.00 USD	\$0.91 USD	\$11.09 USD	⋮
☐	8/7/26, 9:39 PM	Payment from	Tåbäckens Reiki healing	Completed	\$45.00 USD	\$2.74 USD	\$42.26 USD	⋮

5. Supabase — the member cross-check

Supabase isn't a money system — it's the **member list**, used only to confirm “is this person actually an active member?” against a payment. Rather than logging into Supabase directly, Jan and Jez will get an **automatic email every two weeks** with a simple spreadsheet of the same information — each member's email, tier (The Calm Connection / The Calm Circle), and status (active / past due / inactive). No login or database access needed.

 **Screenshot to add here:** Example of the spreadsheet Jan and Jez will receive by email (once the automatic export is set up).

6. How this differs from WooCommerce

A few things look different from the old system — worth knowing so the numbers make sense:

- **Two sources now.** New members are in Stripe/PayPal; existing members are still in WooCommerce. For a full picture during the overlap, pull from both.
- **Recurring, not one-off.** In WooCommerce an order is usually a single record. In Stripe a subscription creates a new charge every period (monthly or yearly), so you'll see the same member pay again each cycle — that's normal.
- **Gross vs. net (fees).** Stripe and PayPal take a processing fee before paying out, so the bank deposit (net) is a little less than the amount the customer paid (gross). WooCommerce order totals were gross. The CSV exports show both.

- **Charge date vs. payout date.** The customer is charged on one day; the money lands in the bank a couple of days later, grouped into a payout. So “revenue this month” and “cash received this month” can differ slightly at month boundaries.
- **Different words.** Stripe says customer / subscription / invoice / charge / payout; WooCommerce said order. They’re the same idea in different clothes.

7. A simple monthly reconciliation checklist

- Export the month’s Stripe payments (CSV) — note gross, fees, net.
- Export the month’s PayPal transactions (CSV).
- Pull the WooCommerce report for existing subscribers (old system).
- Match Stripe/PayPal payouts to the bank deposits.
- Note any refunds (they show as negative entries) so totals line up.

Questions on any screen or number? Happy to jump on a short call and walk through it together, doc in hand. — Siyoul
